

SOLAR POWERED CHRISTMAS LED LASER LIGHT

NBOLXMASSLA

SAFETY & WARNINGS

Laser security warning

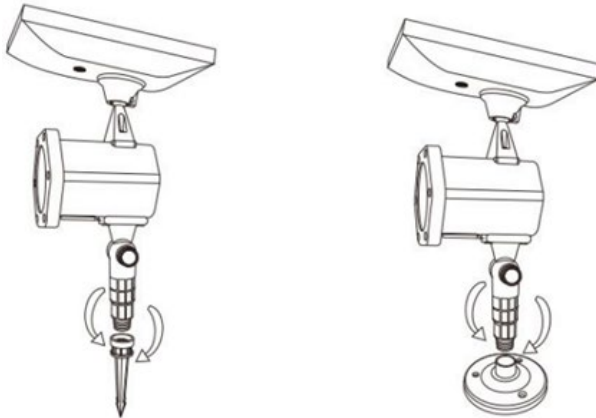

- Potential laser risk: ensure to read and understand the following instructions and cautions before use.
- Always avoid direct visual contact with the laser emitter. Do not aim the lasers directly toward people.
- Do not attempt to repair or disassemble the product, as this may cause dangerous radiation leakage.
- Do not direct the light towards any oncoming passers-by, cars, or traffic routes.

Caution

- The product is waterproof to the IP65 standard; the product will not be affected by rain but should never be immersed in water.
- The battery is waterproof to the IP44 standard, which can protect the battery from light sprays of water. Avoid exposing the battery to rain.
- Due to the differing power requirement for the green laser light, it is necessary to allow the unit to warm up for 1-8 minutes when using the green light on cold days.
- The supplied USB cable is only intended for use with this product.
- Ensure to clean any dirt from the product on a regular basis.

ASSEMBLY

1. Press the red button on the bottom of the solar panel, then install the product in a location where it will receive direct sunlight without shadows. The built-in battery will absorb power generated by solar panel in the daytime, and the LED laser light will operate at night.
2. If additional power is required due to less favourable weather, connect the USB cable to the product, connecting the other end to a power adapter (not supplied). This will allow for emergency power supply.
3. The product can be installed in two positions as desired:
 - Screw on the spike attachment and stake the unit into the ground.
 - Screw on the base attachment to affix the unit to walls or trees.

- If the product is installed in a location with direct sunlight (without shadow obstruction), the charging time for the solar panel will be equivalent to when it is connected to a power adapter via the USB cable (approximately 4 hours).
- This is a Class II laser product with an output power of 1mW, which will not cause fires or burns to the skin. To avoid the risk of optical damage, do not stare at the light.

SPECIFICATIONS

Solar panel	2.6W
Built-in battery	2000MHa
Charging period	4 hours
Battery life	5-8 hours
Operation modes	Automatically charge in the daytime
	Automatically discharge at night
Light source	Green laser (30mW) & red laser (100mW)
Waterproof level	IP65
Irradiation area	50 square meters
Distance	10 meters
AC power rating	110-240V 50/60Hz
DC power rating	5V 1A

IN THE BOX

- 1 x solar lawn light
- 1 x base
- 1 x ground stake
- 1 x USB cable
- 1 x user guide
- 1 x warranty card
